Study Plan Summary
D. N. Kinn - Alexandria, La.

LIFE STAGES AND TROPHIC HABITS OF A MIKOLETZKYA SP. (NEMATODA: DIPLOGASTERIDAE) ASSOCIATED WITH SOUTHERN PINE BARK BEETLES

The Mikoletzkya species associated with bark and engraver beetles found in southern pines will be identified and their trophic habits determined. The role of these nematodes, if any, as natural control agents of bark beetle populations will be assessed.
